

AutoDeploy

## Best of Three Worlds

### Optimize your Package- and Deployment Processes when running JD Edwards in the Cloud

For a Customer, Steltix is implementing JD Edwards in the Amazon Cloud supported by AutoDeploy.

“AutoDeploy helps to maximize Project Efficiency and Predictability”, says Project Manager Wim van Dorst from Steltix. With a predefined schedule, packaging and deployment for Prototype and Production environments is taking place on a daily basis at a defined time.

*“Combining the best of three worlds  
Lowering Cost and Maximizing Predictability.”*

“The biggest benefit”, Wim continues, “is that it saves time for everyone involved in the use of JD Edwards during the project as well as after go live. We have removed slack time in development, increased the pace of delivery for change for our business analysts, and increased the quality of delivered software to the end user. Our ability to scale with Amazon and deliver change continuously with AutoDeploy has enabled us to focus on delivering new value streams for our customers.”

“The flexibility of the Amazon Cloud and the fully automated Package and Deployment process of AutoDeploy support the way we want to deliver our projects: Predictable and Committed.”

- Reduced development and CNC time, dramatically cutting project cost
- On time delivery of milestones by gaining full control of the build and deploy process
- Project resources can focus on activities that add business value

**AutoDeploy**'s mission is to help clients get more out of the Oracle's JD Edwards box, automating expensive and resource-dependent Package and Deployment tasks. AutoDeploy counts a rapidly growing set of world-class companies as customers, including Amway, Balfour Beatty Construction and Colas.
